

# 2018-19 WEEKLY INFLUENZA UPDATE

Preliminary data through week **201919**, the week ending **5/11/2019**

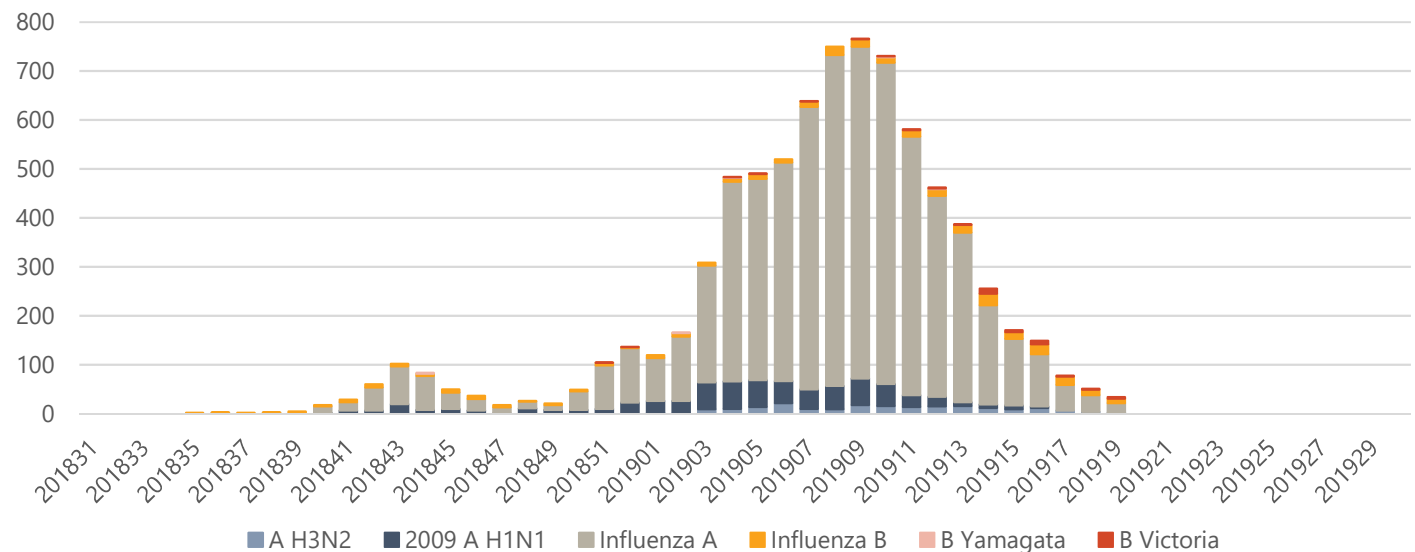

Edited by: Alicia Torfin, Epidemiologist

## OVERVIEW

As of this week:	This season (2018-19)	Last season (2017-18)
<b>Cases reported for the week</b>	34	46
<b>Cumulative cases for season</b>	7,896	8,471
<b>Activity level</b>	Sporadic	Sporadic

Influenza activity in the United States continues to wind down. As of May 4, 2019, the CDC estimates between 37.4 and 42.9 million people have been sick with influenza and between 531,000 to 647,000 people have been hospitalized due to influenza in the United States this flu season. Influenza-like illness (ILI) and hospitalization rates are now high enough to classify the current season as being of “moderate” severity. The total number of pediatric flu deaths throughout the country this season is 106, although that number is likely lower than the actual number since not all pediatric flu deaths are recognized or reported.

Number of Reported Laboratory-Identified **Influenza Cases** by Week

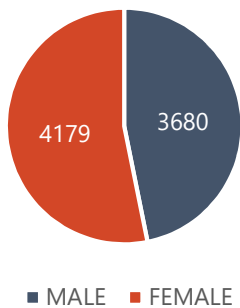

Number of cases:	A H3N2	2009 A H1N1	Influenza A	Influenza B	B Yamagata	B Victoria
<b>This week</b>	2	0	20	9	0	3
<b>This season</b>	207	636	6704	301	7	41

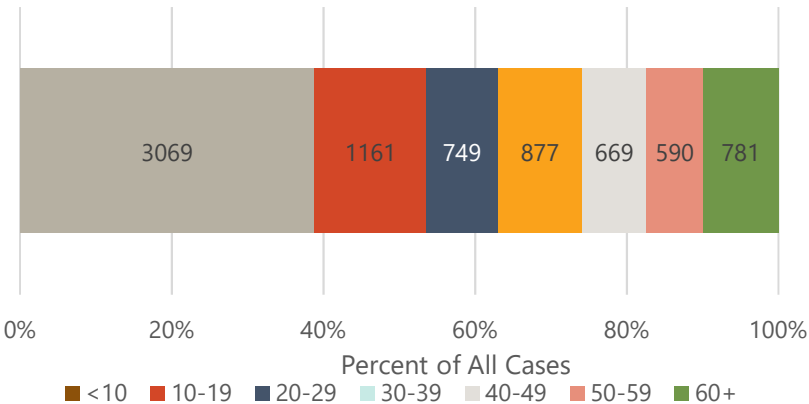

Laboratory-confirmed influenza is a reportable disease in North Dakota. Influenza “cases” include people that have tested positive for influenza in a healthcare setting. It does not include people with influenza who did not seek healthcare, or who were diagnosed without a lab test, which is common. The true number of people with influenza in North Dakota is underrepresented, but case data allows us to see where and in what populations influenza is circulating. It also provides context regarding how the current season compares with previous seasons. Find more information about cases on [www.ndflu.com](http://www.ndflu.com).

## CASE DEMOGRAPHICS

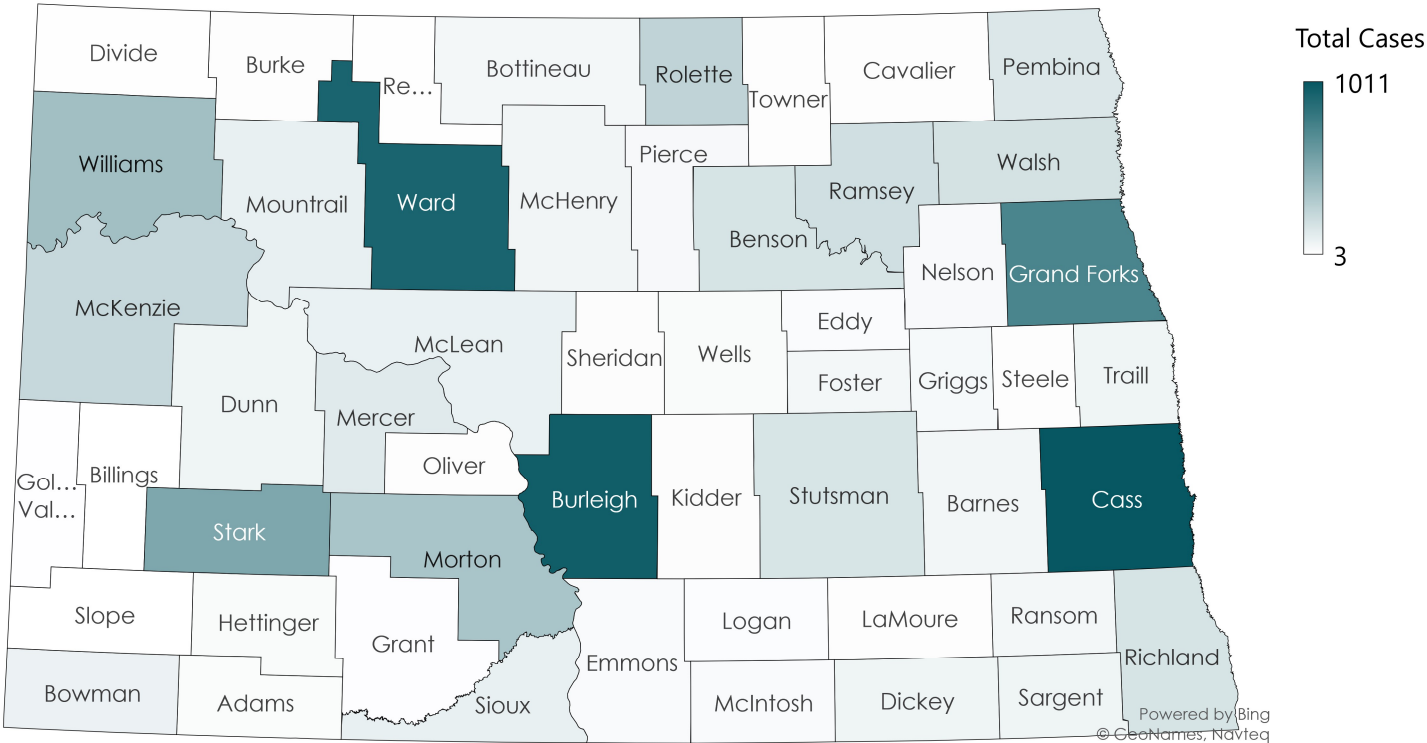

Case Count for Lab-Confirmed Cases by Gender

Case Count for Lab-Confirmed Cases by Age Group

Cases by County

# OUTBREAKS

During the influenza season, influenza outbreaks are common anywhere people gather, including schools, child care centers, and health care facilities. Outbreaks of influenza or influenza-like illness may be reported to the NDDoH. The following outbreaks have been reported this season:

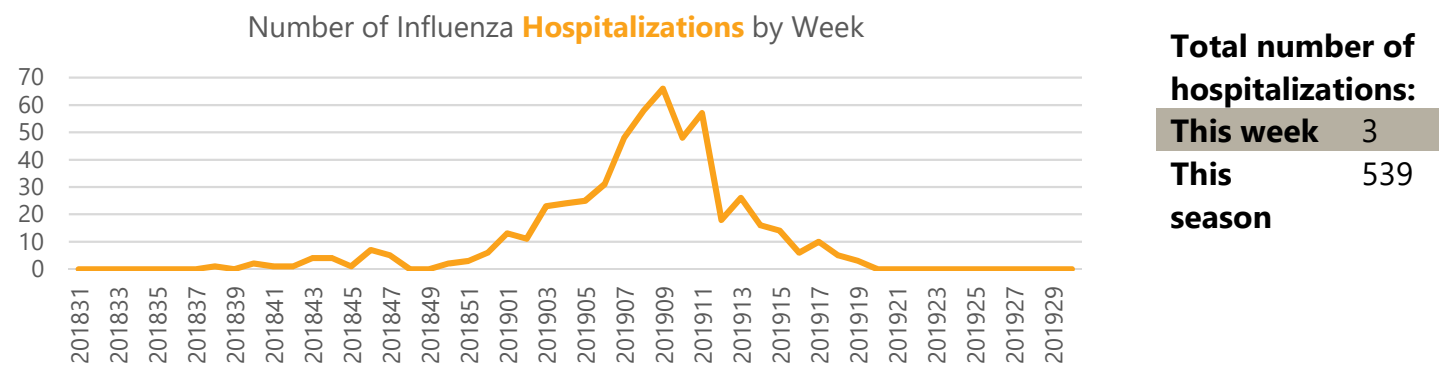

Setting	Number of outbreaks	Identified pathogens
Long Term Care, Basic Care, Assisted Living	21	15 influenza A; 2 influenza A/B; 1 rhinovirus/ <i>Haemophilus influenzae</i> ; 3 unknown
Schools	3	1 influenza A/B; 2 influenza A
Child Care Centers and Preschools	3	1 influenza A; 1 unknown, 1 influenza A/RSV

# SURVEILLANCE PROGRAMS

In addition to case reporting, the NDDoH uses a variety of information sources to fully describe what is happening during the influenza season.

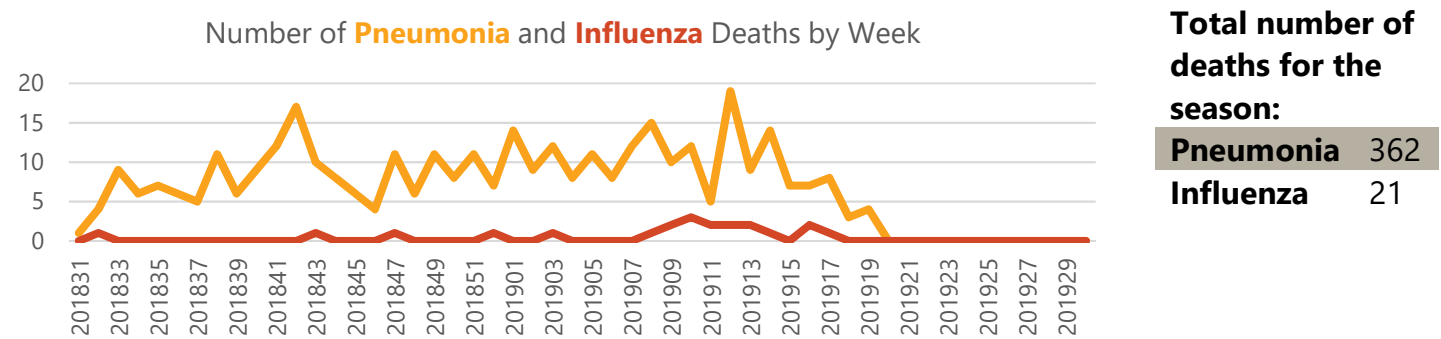

## Hospitalizations

This season, the NDDoH has introduced a new influenza hospitalization surveillance program. Select North Dakota hospitals report the number of influenza-related hospitalizations weekly to the NDDoH. Because this surveillance methodology is new, hospitalization numbers this year may not be comparable to those seen in previous years.

## Deaths

Data on pneumonia and influenza deaths is obtained from Vital Records and based on the cause of death listed on the death certificate.

## Outpatient Influenza-like Illness

The NDDoH participates in the national U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet). Data from participating outpatient providers in North Dakota are pooled to create a state-wide estimate for the weekly percent of healthcare visits due to influenza-like illness (ILI). Patients presenting with a fever of 100°F or greater and a cough and/or sore throat are considered to have ILI. For more information on state and national ILINet data, see [FluView Interactive](#).

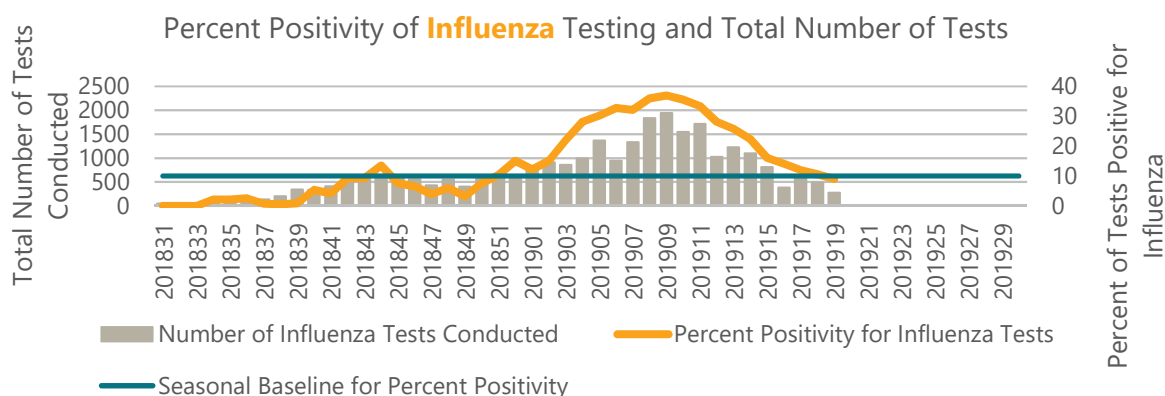

Percent of Outpatient Visits Due to **Influenza-like Illness** by Week, Current and Previous Season

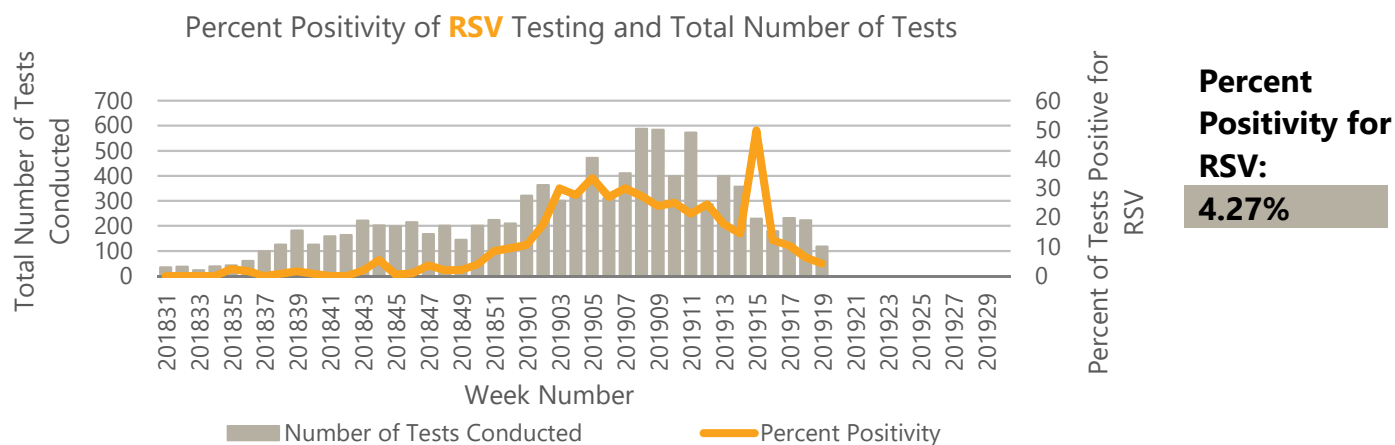

Week Number	Percent ILI	# ILI 0-4 age group	# ILI 5-24 age group	# ILI 25-49 age group	# ILI 50-64 age group	# ILI 65+ age group	Total # visits
201916	1.52%	21	17	9	2	4	3489
201917	0.96%	7	4	13	5	6	3635
201918	1.06%	6	13	14	4	5	3978
201919	0.72	6	10	6	2	1	3478

## Sentinel Laboratory Data

The NDDoH receives influenza and RSV testing data from participating sentinel laboratories across the state. The total number of positive tests and the total number of tests conducted are reported and used to create a state-wide percent positivity statistic. For influenza, percent positivity of 10% or greater indicates "season level" influenza activity.

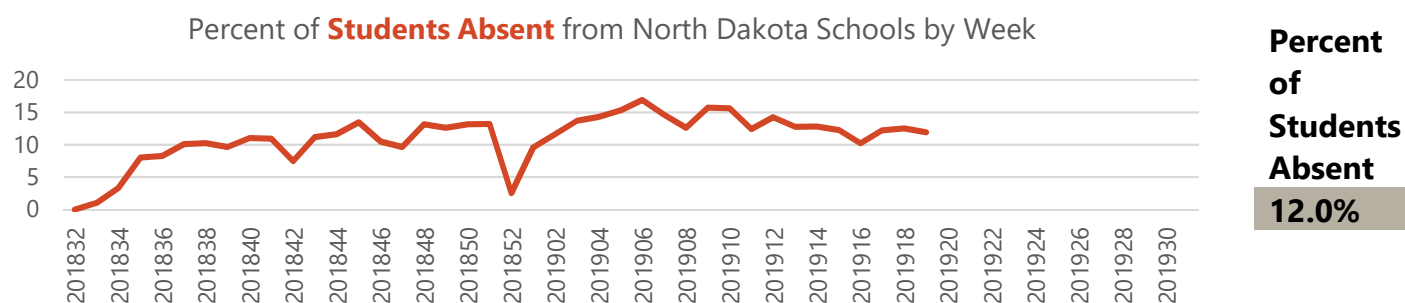

**Percent Positivity for Influenza:**  
**9.03%**

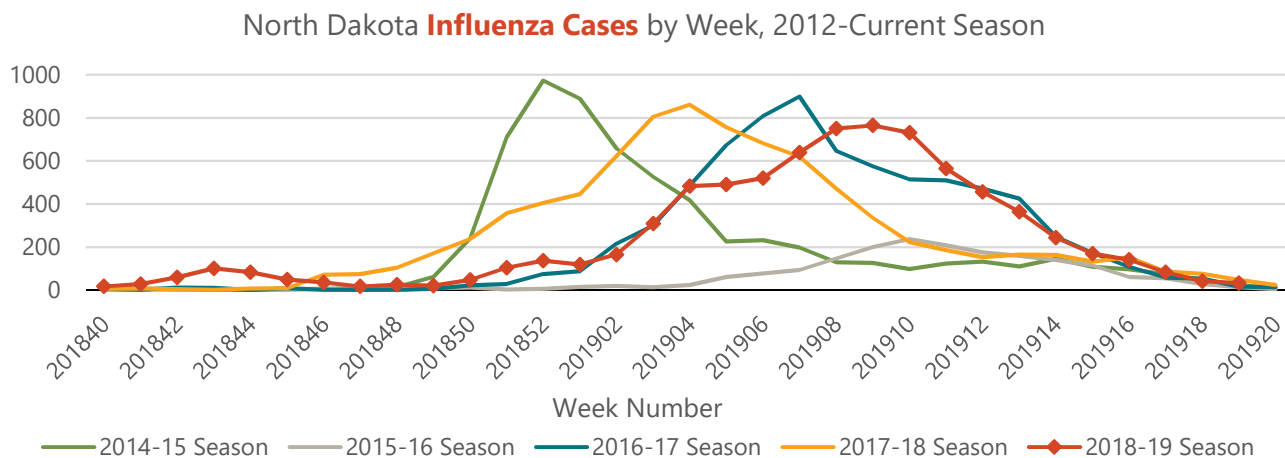

## School Absenteeism

During the influenza season, increases in school absenteeism data can be used as an early indicator for influenza circulation. The NDDoH received absenteeism data from a majority of schools in the state. Data here include absences for all reasons.

## MULTISEASON COMPARISON

Season	Total Cases	Peak Week (week ending)	Predominant Strain
2014-15	6,443	12/27/2014	A H3N2 (vaccine mismatch)
2015-16	1,942	3/12/2016	2009 A H1N1
2016-17	7,507	2/18/2017	A H3N2

2017-18

8,498

1/27/2018

A H3N3

2018-19

7,896 (current)

TBD

## 2018-19 VACCINATION STATS

### Vaccine Doses Administered

The North Dakota Immunization Information System (NDIIS) provides information on vaccines given in ND. Vaccines given to children are required to be entered into the NDIIS, while vaccines given to adults are often entered into the NDIIS but are not required to be entered. Many providers in North Dakota have established an electronic connection with the NDIIS, allowing all vaccinations for that provider to be sent to the NDIIS automatically. A total of **271,766** doses of 2018-19 influenza vaccine have been entered into the NDIIS so far this season.

Influenza **Vaccine** Doses Administered by Week Number

### Vaccination Rates by Age

NDIIS data can also be used to estimate the percent of North Dakotans in each age group that have received an influenza vaccination so far this season. This week, the group with the highest rates is **65 years of age and older** at **53.0%**, and the group with the lowest vaccination rate is **19 to 49 years of age**, at **20.0%**.

Influenza **Vaccination Rates** by Age Group, by Week, Estimated by the NDIIS
